

## **RESEARCH PAPER WRITING: MYTHS & REALITIES**

**Research paper** will explore the ideas and innovative thoughts of research scholar in very short and simple. The number of research paper contributed by **research scholar** will expressed their dedication towards their research. The research paper itself enough to know about the scholar's interest on research in particular domain. This blog will highlight the Ukrainian research giant Oleh to motivate the research scholars. He is the man contributed in the field of neuroscience with his 2, 50,000 knowledge based analysis on brain resulting in a global resolution of neuroscience. Research paper publishing is very mandatory for any research scholar for acquiring the **PhD**. To make scholarly empirical, conceptual, Model based knowledge for future work this involve knowledge creation and dispositions and it will also help future research scholars to their citation these citation forming the base psychometric, bibliometric analysis which determines scholar knowledge, genuinity across the world. It is very important to write a paper relevant to their core domain in which they are doing research and also to know how to write it in a perfect manner. This blog is with 10 tips that will guide you to get more clarity on your research paper writing.

### **Tip 1: Attractive and Relevant Title**

The Title of the research paper is very important because first impression is the best impression the title itself enough to predict the overall content of the entire paper and it will attract the readers. The title can be split into two parts main and sub.

- Main Title focuses on catchy
- Sub Title will be very descriptive which cover all the main aspects of the research.

### **Tip 2: Highlighting important aspects**

Sharing of innovative ideas and researches with fellow researchers and public will make the research meaningful. Again I want to share very interesting comment by oleh that he spend very

few times for his own research and he felt very progressed in his profession as an advisor and mentor for others research.

Publishing the research paper will encourage others to involve research. To publish a paper all you have to gather the highlighting aspects related to your domain. All **journals** follow the unique traditional format of highlighting major aspects of the research paper which will be befitted for both author and the readers.

### **Tip 3: Collecting relevant informations using variety of sources**

Once we ready with the important factors of the study have to collect more informations related to our research paper. The information can be getting from journals, books, magazines, webpages, blogs, forums, interviews, articles and social media. The institution's guidelines are very important for any research scholar before selecting a source of informations. Collected informations should be noted in research paper as per standard rules.

### **Tip 4: Exploring central idea of paper**

Central **idea** is framed with one or two sentences. This is the main section of the research paper which is very focused on what the research paper will explore new to the world. The uniqueness and the importance of the research paper are revealed from the central idea of the paper.

### **Tip 5: Simple and clear outline about the study research & its relevance**

The basic outline has to be formed with collection of informations and it will be act as a base plan for your research paper. Brainstorming technique is one of the best methods for making simple outline. Diagrammatic framework will give a pictorial path representations and relationship with the major factors of the research paper. The formal outline organizes huge amount of informations in hierarchical order.

### **Tip 6: Rough draft Creation**

The structure of the research paper will be designed in the section. Selection of Introduction writing style and the section going to start first will be decided during rough draft creation stage. Some scholars may get struggling with starting the introduction part first so they can simply write the central body of paper then moves for introduction. Some may follow the approach Introduction, central body and conclusion .There is no standard rules exists for section wise

priority in writing research paper the scholar have full independent to choose what is easy and comfort for them.

### **Tip 7: Search for relevant studies and PhD works in the domain**

There are huge quantity of relevant studies and PhD work available so the scholar may get confused where to start and how to start. The scholar may get start with their PhD **professional** guide; the guide will have some information regarding your study research. Second go through the basic text books where you can clear about basic concepts and some reference articles. Third get use of review papers and further the references in that review papers. Other sources like Google scholar, Scopus, research gate. Selecting appropriate study is very important to make the research very focused with its purpose. Here the highlighted important aspects will be very helpful for the selection

### **Tip 8: Research focused introduction**

Introduction of the research paper will cover all the dimensions of the research, exploring the purpose of the study research broadly. This section will answer the readers for following WH questions What, Where, When, Why, Whom and How.

- What is the purpose of research?
- Where the research conducted?
- When the research was conducted?
- Why the research?
- Whom the research will be benefited?
- How the research will be helpful?

### **Tip 9: Detailed central Body**

There should be continuity for Introduction part and the Central body of the research paper. Evidence based statements are organized in the body part in the form of arguments, discussions, real time examples and situations. The detailed description about the issues and the solutions related to research topic will be take place in the body part. The research body will be written as several paragraphs each paragraphs have to discuss on important aspects of the research and provide the evidence based solutions. The connection of each paragraph using transition words is very important to connecting ideas and discussions. Each paragraph has its own idea and that will focus to prove main core idea of the research paper. Careful arrangement of the paragraphs

will provide the logical meaning of the research paper. Transitions words and phrases chosen will improve your research paper language quality more. Some important transition words and Phrases provided in the following table.

Transition words and phrases	Meaning
Accordingly/in accordance with	Used for Agreement statement
Comparatively	Used for differentiation
Equally	Used for similarity
In the same way/manner/vein/	Used for comparable connectivity
Obviously	Used for the confirmation
Various	Used to describe more categories

### Tip 10: Meaningful conclusion

Conclusion of the Research paper must be a summary of the important factors discussed in the entire paper and it will be in very short and meaningful. The readers will get the complete picture of the research paper from this section. There is a link between conclusion part and introduction the **introduction section** will create an interest for the readers in the search of new things and the conclusion part will provide the answers for all the **research questions** discussed in the introduction part. Simply conclusion is like a climax of a movie the success of the movie is based on the meaningful conclusion in the same way a good research paper will conclude with solid results.

### Conclusion

“A friend in need is a friend in need” so the timely guidance is very important for everyone. The *PhDizone* is providing a professional guidance for the research scholar in professional manner. The 10 tips discussed will surely helpful for the scholars those are struggling in their starting stage of **paper writing**. Good starts surely has a success end .Getting an Idea is like a seed without making necessary things for its growth it will not useful for the others in the same way the ideas must be explore and useful for others then only it get appraisable. The research paper will explore your ideas to world and it will also help for the research followers and public. Today we are enjoying various **technological** developments. In each and every development these ideas

where several people were involved. Like Doctors, Teachers, public servants doing research is also a service for the society like other service professions.
