

Content- How Online Literacy Can enrich Academic Performance?

The covid-19 took over the globe like a tsunami and people didn't allow similar big changes to their lives. Scholars are trying to switch from offline to online because universities and colleges have been shut down, and it's egregious that online classes are more flexible than offline, which is helpful in career structure. Online literacy makes a pupil a chastened learner, which lacks offline learning, because seminaries and societies have their old enforceable way of tutoring. Online literacy also encourages a person to become a tech expert, which also helps a pupil in his career.

Now, scholars want to learn their subjects without mugging up. Rather, they prefer audio visual literacy, which helps them with understanding the introductory generalities of all the subjects.

In the American education system, they've handed their scholars an open online literacy gate where a pupil can independently get enrolled for learning different kinds of subjects to develop his holistic personality.

It has also been proved that when a pupil learns a subject from his comfort, he can grasp a conception in a better way which is possible in online mode only. Online literacy also has an advantage for a pupil who doesn't want to move out. Hence, he'll not have to travel on a daily basis.

When we give free space to a pupil for learning a subject without any time boundary, that will always affect deep literacy, which will make him an expert in that subject. There's also a positive thing about online literacy that a pupil can revise a subject multiple times by watching recorded lectures, which is veritably helpful in, conception and clarity of a subject.

Digital literacy is also helpful when a pupil does a part-time job-because a pupil can't earn plutocrat with offline classes because it's time-bound, but online literacy can give them inflexibility of time and it's also veritably helpful to those scholars who live in pastoral areas where seminaries and sodalities are so far from their townlets which is relatively insolvable to them to attend the classes.

Online literacy can ameliorate the performance of those scholars who are shy in nature, because these kinds of scholars don't interact in offline classes, which impacts on their academic performance. Online literacy has some other advantages as well, like a pupil can have multiple options of courses to choose, thereby, they can choose any subject of their choice which will really ameliorate academic performance.

Currently, most scholars are learning with the help of social media like YouTube, Facebook, Instagram, which are a necessary part of their literacy and on top of that, most of them prefer online literacy just because of its feasibility and it has a fresh benefit for economically weaker scholars, because online literacy is cost-effective. Hence, we can easily understand that online literacy is indeed helpful in perfecting the academic performance of a pupil.
